PRECISION TURNED PARTS....

Continuous quality down to the smallest part

www.haberstroh-gmbh.net • info@haberstroh-gmbh.net

Welcome to **Haberstroh GmbH**

For more than 50 years our name has been synonymous with the highest quality in the manufacturing of precision turned components for the electronics industry and precision engineering.

Our company has a long tradition in producing miniscule parts with maximum precision. Based on his experience from working in the watch-making industry and precision engineering, Otto Haberstroh founded his own company in 1968.

Today, Haberstroh GmbH under the management of Harry Haberstroh is a strong partner for all branches of industry for whom maximum-precision components are indispensable. Prestigious customers rely on our competence.

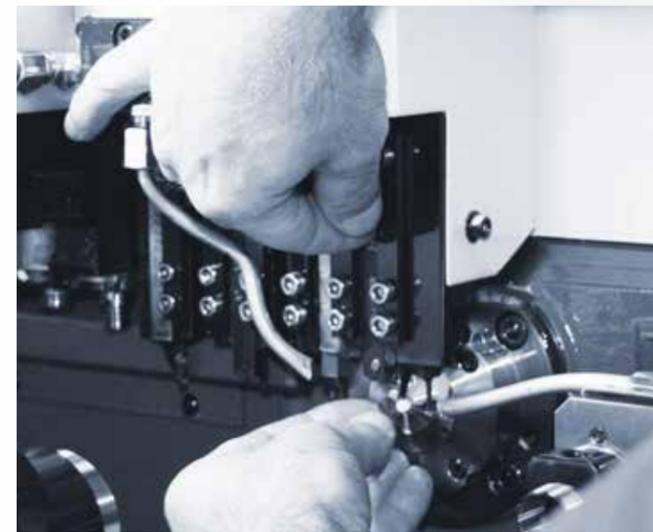

Quality and precision are our guiding principle

Our CNC and cam-controlled precision lathes and finishing machines enable us to manufacture medium and large-scale quantities in diameters ranging from 0.5 to 16mm in non-ferrous metals and free-machining steel.

We are a leading manufacturer of PTFE, PEEK and POM components and other plastic turned parts in diameters ranging from 0.8 to 16mm.

Constant quality checks at each production stage as well as strict adherence to all customer-specific requirements and regulations form the basis of our highly successful collaboration with our customers.

Versatility is our strength

Thanks to our flexibility and the dialogue with our customers, we always come up with the optimum solution. Individual process definition right through to the assembly and manufacturing of customized subassemblies, paying great attention to top quality throughout the manufacturing process are an integral part of the way we work.

The calculation and manufacturing of operating cams for automatic lathes, our carbide grinding shop for special tools as well as the construction of special purpose machines and devices enable us to manufacture to our customers' special requirements with the maximum possible efficiency.

With these manufacturing capabilities on site, meeting delivery deadlines is never a problem for us. For a good product is only perfect when it is delivered on time.

Reliability goes without saying

Customer satisfaction is one of our top principles. Each and every one of our staff members is aware of this. Their performance and entrepreneurial thinking are prerequisites for optimum results.

Top quality in both product and service is the best way to guarantee a lasting partnership with each of our customers.
